##  <br> Amswers <br> Addition

## Step I: Two-digit addition no carrying

When learning written addition, it is important to know how to set numbers out vertically with the correct digits in the correct columns. Here, 56 and 33 are correctly written under the Tens and Units headings.

## What to do

$$
56+33=?
$$

I Set out the numbers in the correct columns with one digit in each square.

\[

\]

2 Always start at the right-hand side, with the units column! Add the top and bottom digits. $6+3=9$

|  | 5 | 6 |
| ---: | ---: | :--- |
| + | 3 | 3 |
|  |  | 9 |

3 Next move to the left and look at the digits in the tens column.
Add the top and bottom digits. 5 tens +3 tens $=8$ tens

|  | 5 | 6 |
| ---: | ---: | ---: |
| $+\quad 3$ | 3 |  |
|  | 8 | 9 |

4 Finally, look at the answer and check whether it seems a sensible answer. You can subtract one of the numbers in the question from the answer to see if it gives you the other number. $89-33=56$. Yes, this is correct.

| 8 | 9 |
| ---: | ---: |
| $-\quad 3$ | 3 |
| 5 | 6 |

## Step 2: Three-digit addition no carrying

For three-digit numbers, work in the same way. Make sure the numbers are set out in the correct columns in the same way. Here, 526 and I43 are correctly written under the Hundreds, Tens and Units headings.

## What to do

$$
526+143=?
$$

I Set out the numbers in the correct columns with one digit in each square.

2 Always start at the right-hand side, with the units column! Add both units digits. $6+3=9$

3 Next move to the left and look at the digits in the tens column.
Add both tens digits. $2+4=6$

| + | 1 | 4 | 3 |
|  |  | 6 | 9 |

4 Then move to the left again and add both hundreds digits. $5+I=6$

5 Finally, look at the answer and check whether it seems a sensible answer. 669 - $143=526$, which is correct!

## Problem solving

7 Choose a single digit greater than 3. Repeat it to make two four-digit numbers and a three-digit number. Then find the sum of the numbers, for example $4444+4444+444$. Do this for $5,6,7,8$ and 9 too. What do you notice about the digits of the answers? Use spare paper for working.

9332, II 665, I3998, 16 331, I8664, 20997
The tens and hundreds digits are the same.

II Palindromic numbers are those that are the same when the digits are written in reverse order, like I555I or 23532 . Use two digits to make two palindromic numbers, for example 37773 and 73337. Add them to find the total. Is the answer palindromic? Try other digits in the same way. Can you find any palindromic answers? Use spare paper for working.

> Only if the two digits have a total of 11 or a total less than 10 , for example 5 and 6 or 1 and 7.

## Step 14: Addition of a list of numbers

It is important to be able to add a long list of numbers. Make sure when you set out the addition that you write the digits into the correct columns first.

## What to do

Find the sum of 47353,573 , 6856, 252 and 12453.

I Line up the digits correctly.
2 Then work from right to left, adding the digits in each column and carrying if necessary. Look for pairs or sets of numbers that total 10 to help you add them.

## Step 18: Decimal addition different numbers of decimal places

## What to do

In this last step, the questions have different numbers of decimal places so you must be careful to write the digits in the correct columns. Sometimes it can help to write zeros in the empty spaces. Don't forget to put the decimal point in your answer each time!
