

General instructions

This book contains the following three practice papers.

- Biology Paper (25 minutes)
- Chemistry Paper (25 minutes)
- Physics Paper (25 minutes)

It is best to do the papers in the order they appear in the book, but don't do all the tests at the same time. Have a break between tests.

The tests are timed and each lasts 25 minutes.

Before you start a test

- When you are ready to do one of the practice papers, find a quiet place where you can concentrate.
- Have a clock or watch ready. The adult who is helping you should start to time each paper from the moment you turn the page and start reading it.
- Don't cheat by reading the questions before the test, or by looking at the answers. If you do, your score won't be accurate.
- When you are ready to begin, turn to the first page of the test paper.

During the test

- Follow the instructions for each question carefully.
- Think about each question and try your best to answer it.
- This symbol shows where you need to put the answer: 
- Remember that for some questions you may need to draw an answer instead of writing one.
- If you cannot answer a question, go on to the next one. If you have time, you can come back to it later.
- If you have time when you reach the end of the test, go back and check your work.

After the test

- The numbers in the right-hand margin of each test page tell you how many marks each question is worth.
- Ask the adult who is helping you to mark your practice paper. The answers and mark scheme are on pages 39 to 46.

DO NOT TURN OVER THIS PAGE UNTIL YOU ARE READY TO START.
